1. What's New in WinTid Version 2026.05.3

WinTid version 2026.05.3 was released on May 19th, 2026.

1.1 Option to limit where Export to disk can save

It is now possible to require that file paths for export to disk start with a predefined prefix. This restricts where export files can be saved. The function is enabled via a script run against the database, and the prefix is configured in the `wt_system` table.

- If the function is enabled and a prefix is defined, all file paths in export configurations must start with the prefix.
- If the function is enabled and no prefix is defined, "Export to disk" will be disabled.
- If the function is not enabled, export to disk will work as usual.

1.1.1 Script

To set the prefix, run the following script:

```
INSERT INTO trc.wt_system (wt_system_nokkel, wt_system_verdi)
VALUES ('manual_export_file_path_start', 'export_file_path')
```

Replace `export_file_path` with the desired file path.

To enable the function, run the following script:

```
INSERT INTO dbo.feature_flag (flag_key, is_enabled)
VALUES ('Export.EnforceExportPathPrefix', 1)
```
