

Product Information

Release B-COMM 5.7.0

Classification: Internal
25 June 2025

The communication software B-COMM is now available in the new version 5.7.0. The new version 5.7.0 replaces the previous version 5.6.0.

Some new features make the operation of B-COMM even more convenient and the configuration options even more extensive, easy and flexible.

Main Features

- 1) **Order 'Deployment of provisioned SSH keys'**
Mixed mode RSA/ED25519 SSH keys are now supported within a tenant. Users can select either the key type or the keys to upload.
An RSA **and** an ED25519 SSH key can be stored.
For example:
File=/home/dormakaba/B-COMM/SSHKeys/private_openssh_default_key_rsa;
File=/home/dormakaba/B-COMM/SSHKeys/private_openssh_default_key_ed25519.
- 2) **Parameterization for [Apple Wallet](#):**
Now that the PEC supports parameterization in the AC30 for Apple Wallet, it is also possible to parameterize the wireless components via B-COMM.
- 3) **Documentation**
The previous online help texts in PDF format have been replaced by [HTML documents](#)
- 4) **"Security and Health Check system information" (SHC)**
The path and name of the device-specific SSH key ID (SSH file name) are transferred to the SHC file. A selection dialog is available for this purpose within "Info" > "Security and Integrity Check System Information." This dialog determines whether the above information should be included in the JSON file or not. By default, the information is not included.
When using a standard SSH key, the SSH key ID is empty.

In some modules, extensions have been made and can be found in the application overview:

Overview

Application Overview – B-COMM 5.7.0

B-COMM – „Overview“

Basic software	TerminalStatus	CardLink	Whitelist	PEC
General	Configuration	Administration area	Administration area	AC
