

# Product Information

## Release B-COMM 5.8.0

Classification: Internal  
30 January 2026

The communication software B-COMM is now available in the new version 5.8.0. The new version 5.8.0 replaces the previous version 5.7.1.

Some new features make the operation of B-COMM even more convenient and the configuration options even more extensive, easy and flexible.

### Main Features

**1) TANlock Device Support (HW Version 3.1 / FW Version 5.1.0):**

TANlock devices are designed and intended for use in data center and critical infrastructure solutions. With this version, B-COMM offers the ability to integrate TANlock devices into a system. A new tenant type, "Tenant for TANlock," is added for TANlock-based channels and TANlock devices. The following features for TANlock device support are implemented in the B-COMM GUI under the channel:

- Stream/device configuration,
- Device information and device actions.

Furthermore, communication with TANlock devices via HTTP/TCP is possible using the B-COMM Helper, and executing requests via the Helper interface is also available. Instructions are included.

**2) SpeedUp B-COMM GUI launch:**

Improvements have been implemented to speed up the loading and launching of the B-COMM GUI. (Speed Up) The loading speed has been increased by a **factor of 5**. The GUI loading process is now also visually indicated.

**3) Digital Wallet:**

Since the PEC already supports configuration for Apple Wallet in the AC30, configuration for Google Wallet in the AC30 is now also configurable in the PEC. Configuration support for Google Wallet for Access Manager 92xx-K7 with the AC30 client has been added to the PEC starting with firmware version 680-06-X-K00.

**4) LEGIC Security Updates:**

Following the announcement in the LEGIC Connect Notification that Trusted Service API versions V3 to V8 would be discontinued in January 2026 and versions V9 to V11 in January 2027, B-COMM updated to Trusted Service API V14.

In some modules, extensions have been made and can be found in the application overview:

Overview

# Application Overview – B-COMM 5.8.0

B-COMM – „Overview“

<b>Basic software</b>	<b>TerminalStatus</b>	<b>CardLink</b>	<b>Whitelist</b>	<b>PEC</b>
